

# Carrots

| Stage               | Dosage (l/ha) | Application                                                                            | Number of Applications |
|---------------------|---------------|----------------------------------------------------------------------------------------|------------------------|
| V3 – V5             | 1 - 2         | Foliar spray at 3 - 5 leaf stage                                                       | 1                      |
| Taproot development | 1 - 2         | Foliar spray 14 days after first application. Repeat 14 days after second application. | 2                      |

All recommendations are based on field experience and trial results worldwide. Genetics by environment (G X E) must be considered in all applications as this has an impact on plant growth and production. Please contact your local supplier/advisor for additional technical assistance. Each recommendation should be adapted to local conditions and/or optimized depending on crop varieties, soil, environment and fertilization programs.
